

Contents

Preface □

E Essentials: Units, Measurement, and Problem Solving □

E.1 The Metric Mix-up: A \$125 Million Unit Error □

E.2 The Units of Measurement □

The Standard Units □

The Meter: A Measure of Length □

The Kilogram: A Measure of Mass □

The Second: A Measure of Time □

The Kelvin: A Measure of Temperature □

Prefix Multipliers □

Units of Volume □

E.3 The Reliability of a Measurement □

Reporting Measurements to Reflect Certainty □

Precision and Accuracy □

E.4 Significant Figures in Calculations □

Counting Significant Figures □

Exact Numbers □

Significant Figures in Calculations □

E.5 Density □

E.6 Energy and Its Units □

The Nature of Energy □

Energy Units □

Quantifying Changes in Energy □

E.7 Converting between Units

E.8 Problem-Solving Strategies

Units Raised to a Power

Order-of-Magnitude Estimations

E.9 Solving Problems Involving Equations

1 Atoms

1.1 A Particulate View of the World: Structure Determines Properties

1.2 Classifying Matter: A Particulate View

The States of Matter: Solid, Liquid, and Gas

Elements, Compounds, and Mixtures

1.3 The Scientific Approach to Knowledge

Creativity and Subjectivity in Science

1.4 Early Ideas about the Building Blocks of Matter

1.5 Modern Atomic Theory and the Laws That Led to It

The Law of Conservation of Mass

The Law of Definite Proportions

...
...

The Law of Multiple Proportions

John Dalton and the Atomic Theory

1.6 The Discovery of the Electron

Cathode Rays

Millikan's Oil Drop Experiment: The Charge of the Electron

1.7 The Structure of the Atom

1.8 Subatomic Particles: Protons, Neutrons, and Electrons

Elements: Defined by Their Numbers of Protons

Isotopes: When the Number of Neutrons Varies

Ions: Losing and Gaining Electrons

1.9 Atomic Mass: The Average Mass of an Element's Atoms

Mass Spectrometry: Measuring the Mass of Atoms and Molecules

1.10 Atoms and the Mole: How Many Particles?

The Mole: A Chemist's "Dozen"

Converting between Number of Moles and Number of Atoms

Converting between Mass and Amount (Number of Moles)

1.11 The Origins of Atoms and Elements

2 The Quantum-Mechanical Model of the Atom

2.1 Schrödinger's Cat

2.2 The Nature of Light

The Wave Nature of Light

The Electromagnetic Spectrum

Interference and Diffraction

The Particle Nature of Light

2.3 Atomic Spectroscopy and the Bohr Model

Atomic Spectra

The Bohr Model

Atomic Spectroscopy and the Identification of Elements

2.4 The Wave Nature of Matter: The de Broglie Wavelength, the Uncertainty Principle, and Indeterminacy

The de Broglie Wavelength

The Uncertainty Principle

Indeterminacy and Probability Distribution Maps

2.5 Quantum Mechanics and the Atom

Solutions to the Schrödinger Equation for the Hydrogen Atom

Atomic Spectroscopy Explained

2.6 The Shapes of Atomic Orbitals

s Orbitals ($l = 0$)

p Orbitals ($l = 1$)

d Orbitals ($l = 2$)

f Orbitals ($l = 3$)

The Phase of Orbitals

The Shape of Atoms

3 Periodic Properties of the Elements

3.1 Aluminum: Low-Density Atoms Result in Low-Density Metal

3.2 The Periodic Law and the Periodic Table

3.3 Electron Configurations: How Electrons Occupy Orbitals

Electron Spin and the Pauli Exclusion Principle

Sublevel Energy Splitting in Multi-electron Atoms

Electron Configurations for Multi-electron Atoms

3.4 Electron Configurations, Valence Electrons, and the Periodic Table

Orbital Blocks in the Periodic Table

Writing an Electron Configuration for an Element from Its Position in the Periodic Table

The Transition and Inner Transition Elements

3.5 Electron Configurations and Elemental Properties

Metals and Nonmetals

Families of Elements

The Formation of Ions

3.6 Periodic Trends in Atomic Size and Effective Nuclear Charge

Effective Nuclear Charge

Atomic Radii and the Transition Elements

3.7 Ions: Electron Configurations, Magnetic Properties, Radii, and Ionization Energy

Electron Configurations and Magnetic Properties of Ions

Ionic Radii

Ionization Energy

Trends in First Ionization Energy

Exceptions to Trends in First Ionization Energy

Trends in Second and Successive Ionization Energies

3.8 Electron Affinities and Metallic Character

Electron Affinity

Metallic Character

3.9 Periodic Trends Summary**REVIEW****Self-Assessment****Key Learning Outcomes****Key Terms****Key Concepts****Key Equations and Relationships****EXERCISES****Review Questions****Problems by Topic****Cumulative Problems****Challenge Problems****Conceptual Problems****Questions for Group Work****Data Interpretation and Analysis****Answers to Conceptual Connections****4 Molecules and Compounds****4.1 Hydrogen, Oxygen, and Water****4.2 Types of Chemical Bonds****4.3 Representing Compounds: Chemical Formulas and Molecular Models****Types of Chemical Formulas****Molecular Models****4.4 The Lewis Model: Representing Valence Electrons with Dots****4.5 Ionic Bonding: The Lewis Model and Lattice Energies****Ionic Bonding and Electron Transfer****Lattice Energy: The Rest of the Story****Ionic Bonding: Models and Reality****4.6 Ionic Compounds: Formulas and Names****Writing Formulas for Ionic Compounds**

Naming Ionic Compounds

Naming Binary Ionic Compounds Containing a Metal That Forms Only One Type of Cation

Naming Binary Ionic Compounds Containing a Metal That Forms More Than One Type of Cation

Naming Ionic Compounds Containing Polyatomic Ions

Hydrated Ionic Compounds

4.7 Covalent Bonding: Simple Lewis Structures

Single Covalent Bonds

Double and Triple Covalent Bonds

Covalent Bonding: Models and Reality

4.8 Molecular Compounds: Formulas and Names

4.9 Formula Mass and the Mole Concept for Compounds

Molar Mass of a Compound

Using Molar Mass to Count Molecules by Weighing

4.10 Composition of Compounds

Mass Percent Composition as a Conversion Factor

Conversion Factors from Chemical Formulas

4.11 Determining a Chemical Formula from Experimental Data

Calculating Molecular Formulas for Compounds

Combustion Analysis

4.12 Organic Compounds

10 Gases

10.1 Supersonic Skydiving and the Risk of Decompression

10.2 A Particulate Model for Gases: Kinetic Molecular Theory

10.3 Pressure: The Result of Particle Collisions

Pressure Units

The Manometer: A Way to Measure Pressure in the Laboratory

10.4 The Simple Gas Laws: Boyle's Law, Charles's Law, and Avogadro's Law

Boyle's Law: Volume and Pressure

Charles's Law: Volume and Temperature

Avogadro's Law: Volume and Amount (in Moles)

10.5 The Ideal Gas Law

The Ideal Gas Law Encompasses the Simple Gas Laws

Calculations Using the Ideal Gas Law

Kinetic Molecular Theory and the Ideal Gas Law

10.6 Applications of the Ideal Gas Law: Molar Volume, Density, and Molar Mass of a Gas

Molar Volume at Standard Temperature and Pressure

Density of a Gas

Molar Mass of a Gas

10.7 Mixtures of Gases and Partial Pressures

Deep-Sea Diving and Partial Pressures

Collecting Gases over Water

10.8 Temperature and Molecular Velocities

10.9 Mean Free Path, Diffusion, and Effusion of Gases

10.10 Gases in Chemical Reactions: Stoichiometry Revisited

Molar Volume and Stoichiometry

10.11 Real Gases: The Effects of Size and Intermolecular Forces

The Effect of the Finite Volume of Gas Particles

The Effect of Intermolecular Forces

Van der Waals Equation

Real Gas Behavior

Answers to Conceptual Connections

22 Transition Metals and Coordination Compounds

22.1 The Colors of Rubies and Emeralds

22.2 Properties of Transition Metals

Electron Configuration

Atomic Size

Ionization Energy

Electronegativity

Oxidation State

22.3 Coordination Compounds

Ligands

Coordination Numbers and Geometries

Naming Coordination Compounds

22.4 Structure and Isomerization

Structural Isomerism

Stereoisomerism

22.5 Bonding in Coordination Compounds

Valence Bond Theory

Crystal Field Theory

Octahedral Complexes and *d* Orbital Splitting

22.6 Applications of Coordination Compounds

Chelating Agents

Chemical Analysis

Coloring Agents

Biomolecules

Data Interpretation and Analysis

Answers to Conceptual Connections

Appendix I Common Mathematical Operations in Chemistry

A Scientific Notation

B Logarithms

C Quadratic Equations

D Graphs

Appendix II Useful Data

A Atomic Colors

B Standard Thermodynamic Quantities for Selected Substances at 25 °C

C Aqueous Equilibrium Constants

D Standard Electrode Potentials at 25 °C

E Vapor Pressure of Water at Various Temperatures

Appendix III Answers to Selected End-of-Chapter Problems

Appendix IV Answers to In-Chapter Practice Problems
